

Chemical Storage On The Fly

Project:
Chemical Storage Building

Client:
Campbell's Distribution
Center

A major distribution company in NC required a hazardous waste storage building and matching containment pans. The catch was they needed it delivered in less than 4 days. This national warehouse and supply center was not in compliance with their hazardous waste storage. Although they had money in their budget for a chemical storage building and containment pan they needed to spend it by the end of their fiscal year. With only 4 days to purchase the equipment and have it delivered the company contacted Core Engineered Solutions.

Core was able to provide a PT 12-20 from our inventory of in-stock buildings as well as securing and coordinating shipment / delivery of the building. Core was able to meet the companies budget and compliance issues on a fast-track basis. Core Engineered Solutions carries an inventory of PRO-TEC chemical storage buildings that are available for immediate delivery.

To discuss your chemical storage needs with a Core specialist or to learn more about Core's capabilities, contact us at 800-628-5502 or email us at info@core-es.com.
