

# Core Provides Turnkey Fueling Systems for United States Border Patrol

**Project:**  
National Fleet Fueling Systems

**Client:**  
United States Border Patrol

The United States Border Patrol's mission is to protect the boundaries of the United States by patrolling 8,000 miles of international boundaries via automobile, boat and aircraft. To refuel their fleet the Border Patrol required vehicle fueling systems throughout the country.

To date, Core Engineered Solutions has furnished the Border Patrol with turnkey fueling systems at nearly 30 sites throughout the country. This included design, production, installation, start-up and training. Electronic fuel management systems were installed at all sites for security and accountability. The fuel management systems are linked to a site PC and have capabilities for remote monitoring via modem.

Core's GSA contract was a major selling point because it allowed the Border Patrol to bypass the lengthy government bidding process. Core had an advantage over competitors as they were able to offer outstanding service, coast-to-coast, with one point of contact. In addition, Core's pre-engineered fueling systems provided the Border Patrol with standardized equipment throughout the country.

To discuss your National fueling applications with a Core specialist or to learn more about our capabilities, contact us at 800-628-5502, Fax 703-883-8177, Core Engineered Solutions, 8500 Leesburg Pike, Suite 7800, Vienna, VA 22182.

Core furnished the U.S. Boarder Patrol with nearly 50 turnkey fueling systems throughout the country. This included design, production, installation, start-up and training.
