

## Core Provides Efficient, Cost Effective Upgrades at VA National Cemetery Maintenance Facilities

**Project:**  
VA National Cemetery

**Location:**  
Beverly, NJ

Core Engineered Solutions was asked to design, procure and install a new fuel dispensing system for the VA National Cemetery in Beverly, NJ. The project also included UST removal, soil testing and a new fuel management system.

Throughout the country, Core has worked with the National Cemetery Agency to upgrade all of their maintenance facilities. The various sites had both underground and aboveground tanks to be upgraded. Our pre-engineered fueling systems allowed the N.C.A. to standardize on one tank configuration and fuel management system across the country, with only one point of contact. In addition, Core's GSA contract (GS07F-9110G) allowed the N.C.A. to bypass the lengthy and often expensive government bidding process.

To discuss your National fueling applications with a Core specialist or to learn more about our capabilities, contact us at 800-628-5520, Fax 703-883-8177, Core Engineered Solutions, 8500 Leesburg Pike, Suite 7800, Vienna, VA 22182.

Core designed, procured and installed this fueling system for the VA National Cemetery in Beverly, NJ. Similar systems have been installed for the V.C.A. throughout the country.
