

Mission Critical Fueling

Our Knowledge Is Your Greatest Asset

SVT (Systems Verification Test) Integrated Control Panel

Our mission critical fueling systems come equipped with a proprietary Systems Verification Test (SVT) Integrated Control Panel that includes an operator friendly Graphical Interface Display. The SVT panel merges alarm functions, day tank controls, valving, filtration and multiple pump controls into one unit.

A Unique Design:

Our unique design allows users to run a comprehensive, real-time systems verification test cycle of the entire fueling system at any time. If a Power Loss Event occurs during the test, the system automatically reverts to full operational status without jeopardizing the mission.

Typical Mission Critical / Emergency Power Systems Include:

- Protected Aboveground Tanks
- Duplex Pump Sets/Controls
- Tank Manifold Controls
- Day Tanks w/ Level Controls
- Filtration Pump Sets/Controls
- Tank Filling / Tank Monitoring System
- Integrated SVT Control Panel
- Multiple Communication Port Interfaces Available

Ease Of Use

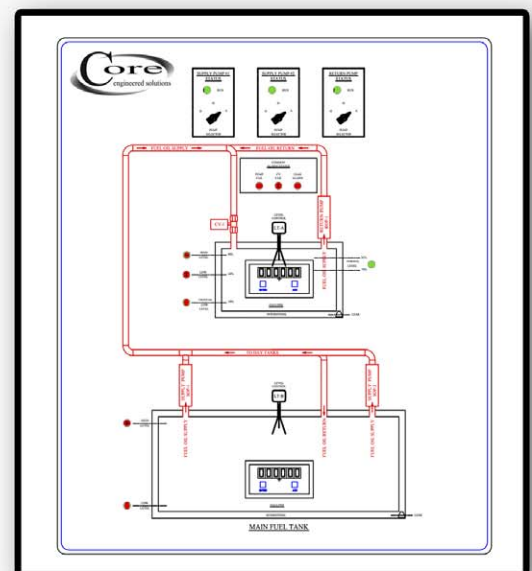

Control and monitoring of all fuel related equipment from one panel.

Operational Validation

Run a comprehensive real time fuel systems verification test.

Reliability

Automatically reverts to pre-event status if a power loss occurs during test.
