

Contaminated Fuel Sample

*Have you sampled and tested your fuel in the past 6 months?
Did the analysis show microbial activity (bugs)?*

Kathon FP 1.5 can prevent damage to your fuel tank!

Tank Corrosion

The Problem... Your fuel is vulnerable to water contamination during transport and storage. And, once you have water in your fuel system, you are set for an invasion of microorganisms. Microbes attack at the fuel/water interface, where they thrive and multiply. Once established, they entrench themselves in a thick layer of slimy deposits and create a number of problems such as:

- Plugged fuel filters
- Clogged injectors
- Hazy fuel
- Leaking tanks
- Increased corrosion
- Increased service calls
- Customer complaints

The Solution... Most of the problems associated with microbial attack can be easily avoided. The answer? A good housekeeping program. All it requires is two simple elements:

- Drain water bottoms frequently. Removing water from your tank robs the microorganisms of the single most important element for growth - Water.
- Treat your fuel system with Kathon FP 1.5 on a regular basis.

Kathon FP 1.5 is arguably the finest biocide available in the market place today. Kathon FP 1.5 is not repackaged, blended, or sold under any other name. Studies performed have consistently demonstrated Kathon's superiority over all other biocides. No other biocide offers the combination of efficiency, economy, and pedigree that Kathon FP 1.5 does. We have a 100% success rate in the field. Kathon FP 1.5 has a treat rate of 1:10,000 curative. Kathon FP 1.5 is available in quarts, 1/2-gallon, 1-gallon, 5-gallon pail and 30-gallon drums.
